

N of reco track vs dxy

N of associated (recoToSim) tracks vs dxy

Figure 10 consists of two panels. The top panel is a scatter plot showing the distribution of fake tracks as a function of track d_{xy} (cm). The y-axis is labeled 'fake tracks' and is on a logarithmic scale from 1 to 10^3 . The x-axis is labeled 'track d_{xy} (cm)' and ranges from -25 to 25. Data points are shown as small black dots, with a cluster of points around $d_{xy} = 0$ and $d_{xy} = 5$ cm. The bottom panel is a histogram showing the distribution of track d_{xy} (cm). The x-axis is labeled 'track d_{xy} (cm)' and ranges from -25 to 25. The y-axis is labeled 'F' and ranges from 0.8 to 0.9. The histogram shows a sharp peak at $d_{xy} = 0$ cm, with a value of $F \approx 0.9$.
