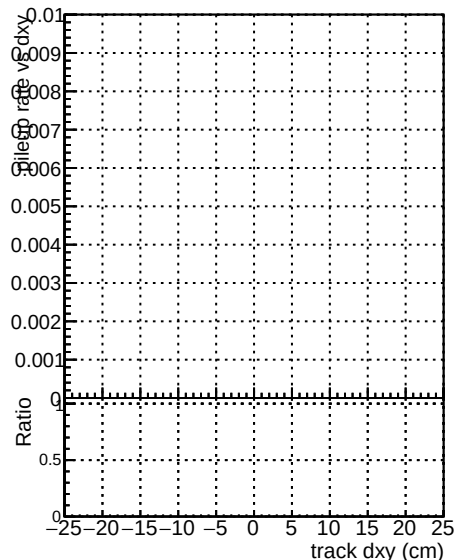

Figure 1: Overview of the proposed framework. The diagram illustrates the data flow and model training process. It starts with a 'Fake rate vs d' plot, followed by a sequence of model representations: DOM, mFitt, mFitt, XMin, mMin, NOBL, and base. These models are then used to retrain 'OldFiles125 v2', which produces 'prelimWPM epoch4' and 'ANDPLeSSRetrain epoch4' results.
