

Number of tracks vs collection

Number of true tracks vs collection

Number	DOM	mkFit	TTbase
--------	-----	-------	--------

Figure 1 is a log-linear plot showing the ratio of duplicate tracks for various methods. The y-axis is labeled 'Ratio' and ranges from 1 to 10^5 on a logarithmic scale. The x-axis lists the methods: generalTracks, initialStep, initialQuasiStep, highPRTriplesStep, detachedTriplesStep, detachedQuasiStep, linkedPairStep, linkedTriplesStep, linkedLessStep, linkedCoreRegionalStep, linkedSeededStep, and linkedSeededStepInt. The plot shows that the 'detached' and 'linked' methods have ratios significantly higher than 1, while 'generalTracks' and 'initialStep' have ratios around $10^{4.5}$ and $10^{4.2}$ respectively. The 'linkedSeededStepInt' method has a ratio of 1.0.

Number of pileup tracks vs collection
