

Figure 10 consists of two stacked plots. The top plot is labeled 'fake tracks' on the y-axis. The x-axis is labeled 'track dxy (cm)' and ranges from -25 to 25. The y-axis is logarithmic, with major ticks at 1 and 10. The plot shows a sharp peak at 0 cm, with a value of approximately 10. There are also smaller peaks at approximately -2 cm and 12 cm. The bottom plot is labeled 'real' on the y-axis. The x-axis is the same as the top plot. The y-axis is logarithmic, with major ticks at 1 and 2. The plot shows a sharp peak at 0 cm, with a value of approximately 2. There are also smaller peaks at approximately -2 cm and 12 cm.
