Fake rate vs d

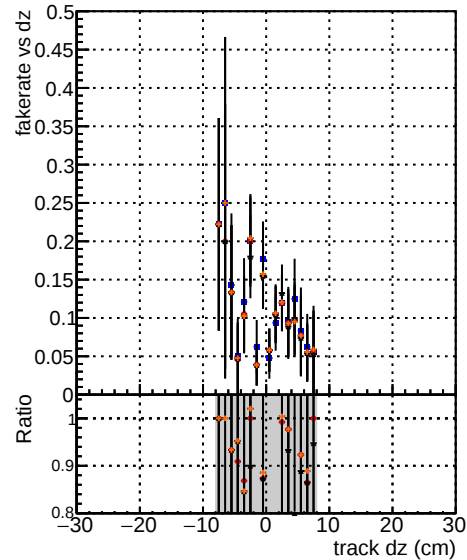

Figure 1 shows the change in the number of individuals (N) over time (t) for two populations. The y-axis is labeled N and ranges from 0 to 0.01. The x-axis is labeled t and ranges from 0 to 10. The solid line represents the population with a higher initial density, and the dashed line represents the population with a lower initial density. Both lines show a rapid initial increase followed by a plateau. The solid line plateaus at a higher value than the dashed line.
