

Ratio

This plot shows the ratio of the DQM_TT_Original-pLess selection to the DQM_TT_Original selection as a function of the cut on dz(PV) in cm. The y-axis ranges from 0.95 to 1.0. The ratio starts at approximately 0.95 for a 0 cm cut and rises sharply to about 0.98 at 0.1 cm, then continues to rise more gradually, reaching a plateau of approximately 0.99 for cuts greater than 0.3 cm.
