

Number of tracks vs collection

Number of true tracks vs collection

Number	Legend
	—●— DQM_mkFit_TTbarPU-ncp
	—▲— DQM_mkFit_TTbarPU-newTr6

The figure consists of two vertically stacked plots sharing a common x-axis. The x-axis labels are: generalTracks, initialStep, finalStep, QuasiStep, gnetPTTripleStep, gnetPTTripleStep, reachedQuasiStep, reachedTripleStep, ProlPairStep, fixedTripleStep, TripleLessStep, TrecStep, UnionSeedsStep, UnionSeedsStep, and PrefRegionalStep.

- Top Plot:** Y-axis is "Duplicate tracks" on a logarithmic scale from 10^0 to 10^5 . Data points are shown as black dots with horizontal error bars. The values generally decrease from left to right, starting around 10^4 and ending near 10^2 .
- Bottom Plot:** Y-axis is "Ratio" on a linear scale from 1 to 1.5. Data points are shown as black dots with horizontal error bars. Most values are close to 1.0, with some outliers reaching up to approximately 1.5.

Number of pileup tracks vs collection
