

N of reco track vs normalized χ^2

N of associated (recoToSim) tracks vs normalized χ^2

Figure 1 consists of two panels. The top panel is a log-linear plot showing the number of fake tracks (y-axis, logarithmic scale from 10¹ to 10⁴) versus the track χ^2 (x-axis, linear scale from 0 to 20). The data points are shown with error bars, and a solid line represents the fit. The bottom panel is a linear plot showing the ratio of the fit to the data (y-axis, linear scale from 0.6 to 1.2) versus the track χ^2 (x-axis, linear scale from 0 to 20). The ratio is shown with error bars, and a horizontal line at 1.0 indicates the expected ratio.

N of associated (recoToSim) looper tracks vs normalized χ^2

N of reco track vs. s
