Figure 1 is a log-linear plot showing the ratio of duplicate tracks between different steps of the process. The y-axis is labeled 'Ratio' and ranges from 0.8 to 10⁵ on a logarithmic scale. The x-axis lists 15 steps: generalTracks, initialStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep, firstStep. The plot shows that the ratio of duplicate tracks is generally high (above 10²) for the first few steps and then drops significantly (below 10²) for the subsequent steps. A horizontal line at Ratio = 1 indicates the baseline.

Number of pileup tracks vs collection
