Figure 1 is a log-linear plot showing the ratio of duplicate tracks for various track types. The y-axis is labeled 'Ratio' and ranges from 0.95 to 10^5 on a logarithmic scale. The x-axis lists the track types: generalTracks, initialStep, finalStep, Clusters, lightPRTripleStep, darkPRTripleStep, detachedTripleStep, triplePairStep, tripleSecStep, tripleTSecStep, tripleCoreStep, nonSeedStep, nonSeedStepInO, and displacedRegionStep. The plot shows data points for each track type, with red and blue dots and error bars. A horizontal line at Ratio = 1.0 is shown for reference. The ratios for most track types are close to 1.0, while some track types like Clusters and tripleCoreStep show higher ratios, around 10^2 .

Number of pileup tracks vs collection
