

Efficiency vs vertpos

fake+duplicates vs vert r

Efficiency

Figure 1 consists of two panels sharing a common x-axis labeled "track ref. point z (cm)" ranging from -30 to 30. The top panel's y-axis is labeled "fake+duplicates vs. z" and ranges from 0 to 1. It shows data points with vertical error bars for five track types: green, magenta, orange, purple, and black. The bottom panel's y-axis is labeled "Ratio" and ranges from 0.8 to 1.2. It shows data points with vertical error bars for the same five track types. Both panels show a general trend where the ratio is around 0.1 in the top panel and around 1.0 in the bottom panel, with some fluctuations and larger error bars at certain z values.
