

Efficiency vs vertpos

fake+duplicates vs vert r

[illegible]

Figure 1 is a plot showing the ratio of fake+duplicates vs. z for different track reference points. The x-axis is labeled "track ref. point z (cm)" and ranges from -30 to 30. The y-axis is labeled "Ratio" and ranges from 0 to 0.8. The plot shows data points with error bars for various track reference points. The ratio is highest for negative track reference points and decreases as the track reference point increases.

Efficiency vs. sim PV z

fake+duplicates vs Sim. PV z
