

N of simulated tracks vs pT

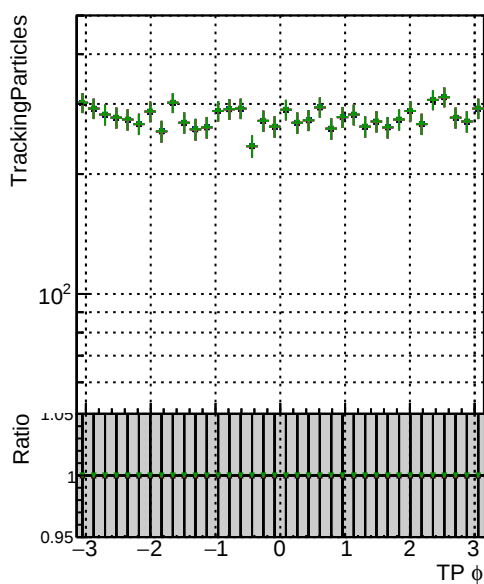

N of associated tracks (simToReco) vs pT

[illegible]

A scatter plot with a logarithmic y-axis labeled 'Reconstructed TPs' ranging from 0.95 to 10³. The x-axis is labeled 'TP η ' and ranges from -3 to 3. Green dots representing data points are clustered at approximately $\eta = 1.8$, with values between 300 and 500. A vertical shaded gray band is located between $\eta \approx 1.7$ and 1.9 .

N of simulated tracks vs phi
