

Figure 1 is a log-log plot showing the ratio of tracking particles to the total number of particles as a function of the transverse momentum p_T (GeV). The x-axis ranges from 10^{-1} to 10^3 GeV, and the y-axis (Ratio) ranges from 0.95 to 10^4 . The plot shows a horizontal line at a ratio of 1.0 for $p_T > 1$ GeV. For $p_T < 1$ GeV, the ratio is shown as green points with error bars, which are mostly around 1.0, with one point at $p_T \approx 0.1$ GeV reaching up to 10^4 .
