Plot of Efficiency vs sim PV z. The x-axis ranges from -30 to 30. The y-axis ranges from 0.95 to 0.01. Data points are shown with error bars, and a horizontal line is drawn at 1.0. The plot shows a distribution of data points with significant error bars, mostly concentrated between -10 and 10.

Plot of fake+duplicates vs Sim. PV z. The x-axis ranges from -30 to 30. The y-axis ranges from 0.95 to 0.2. Data points are shown with error bars, and a horizontal line is drawn at 1.0. The plot shows a distribution of data points with significant error bars, mostly concentrated between -10 and 10.

Efficiency vs. sim PV z

Plot of Efficiency vs. sim PV z. The x-axis ranges from -10 to 20. The y-axis ranges from 0.95 to 0.01. Data points are shown with error bars, and a horizontal line is drawn at 1.0. The plot shows a distribution of data points with significant error bars, mostly concentrated between -5 and 10.

fake+duplicates vs Sim. PV z

Plot of fake+duplicates vs Sim. PV z. The x-axis ranges from -4 to 10. The y-axis ranges from 0.95 to 0.2. Data points are shown with error bars, and a horizontal line is drawn at 1.0. The plot shows a distribution of data points with significant error bars, mostly concentrated between 0 and 6.
