

Figure 1 is a log-log plot showing the distribution of the number of iterations required for convergence. The x-axis is labeled 'Iterations' and ranges from 10^{-2} to 10^2 . The y-axis is labeled 'Number of cases' and ranges from 0 to 0.05. The plot displays a series of vertical bars representing the frequency of iterations, with a red line indicating the total number of cases. The distribution is highly skewed, with most cases requiring between 10^{-1} and 10^0 iterations.
