

N of reco track vs normalized χ^2

N of associated (recoToSim) tracks vs normalized χ^2

The figure consists of two vertically stacked panels sharing a common x-axis labeled 'track χ^2 ' ranging from 0 to 20. The top panel shows 'fake_tracks' on a logarithmic y-axis from 1 to 10,000. It contains two data series: red circles and blue circles, both showing a decreasing trend as χ^2 increases. The bottom panel shows 'Ratio' on a linear y-axis from 0.9 to 1.4. It contains two data series: red circles and blue circles, both fluctuating around a ratio of 1.0. Vertical grey shaded bands are present in the bottom panel, corresponding to the regions where the ratio deviates significantly from 1.0.
