

N of reco track vs dxy

N of associated (recoToSim) tracks vs dxy

Figure 10 consists of two panels. The top panel is a log-linear plot of 'fake tracks' versus 'track dxy (cm)'. The y-axis is logarithmic, ranging from 10^2 to 10^4 . The x-axis ranges from -25 to 25 cm. The plot shows a distribution of fake tracks with a peak around 0 cm. The bottom panel is a linear plot of 'F' versus 'track dxy (cm)'. The y-axis ranges from 0.95 to 1.0. The x-axis ranges from -25 to 25 cm. The plot shows a series of vertical lines with orange dots, representing the fraction of fake tracks as a function of track dxy.
