

N of reco track vs normalized χ^2

N of associated (recoToSim) tracks vs normalized χ^2

Figure 1 consists of two panels. The top panel is a log-linear plot of 'fake tracks' (y-axis, logarithmic scale from 10² to 10⁵) versus 'track χ^2 ' (x-axis, linear scale from 0 to 20). The data points are purple circles with error bars, showing a decreasing trend. A solid black line represents a fit to the data. The bottom panel is a linear plot of 'Ratio' (y-axis, linear scale from 0.95 to 1.05) versus 'track χ^2 ' (x-axis, linear scale from 0 to 20). The data points are red circles with error bars, fluctuating around a ratio of 1.0. A solid black line represents a fit to the data.

N of associated (recoToSim) looper tracks vs normalized χ^2

N of reco track vs. s
