

N of reco track vs dxy

N of associated (recoToSim) tracks vs dxy

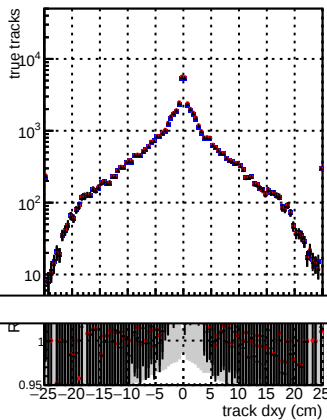

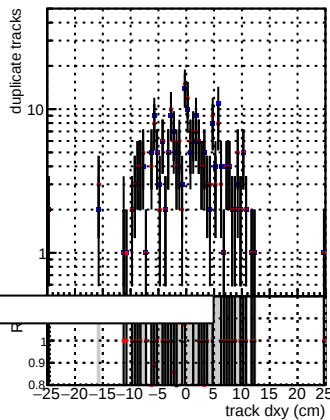

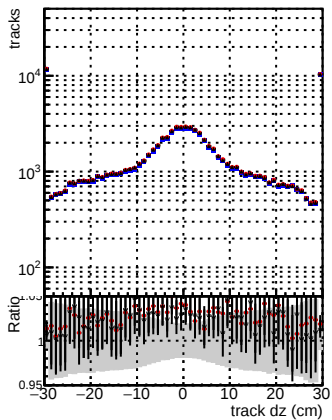

Figure 10 consists of two panels. The top panel is a log-linear plot of 'fake tracks' versus 'track dxy (cm)'. The y-axis is logarithmic, ranging from 10 to 1000. The x-axis ranges from -25 to 25 cm. Data points are shown as black dots, with a red line and blue line representing different fits or models. The distribution is bell-shaped, peaking at 0 cm. The bottom panel is a linear plot of 'F' versus 'track dxy (cm)'. The y-axis ranges from 0.95 to 1.0. The x-axis ranges from -25 to 25 cm. Data points are shown as black dots, with a red line and blue line representing different fits or models. The distribution is bell-shaped, peaking at 0 cm.
