

N of reco track vs dxy

N of associated (recoToSim) tracks vs dxy

The figure consists of two panels. The top panel shows the number of fake tracks as a function of track d_{xy} (cm). The y-axis is logarithmic, ranging from 10^1 to 10^2 . The x-axis ranges from -25 to 25 cm. Data points are shown with error bars, and a solid line represents the fit. The bottom panel shows the fraction of fake tracks as a function of track d_{xy} (cm). The y-axis is linear, ranging from 0.95 to 1.0. The x-axis ranges from -25 to 25 cm. Data points are shown with error bars, and a solid line represents the fit.
