

N of associated tracks (simToReco) vs transverse vert position

The figure consists of two vertically stacked plots sharing a common x-axis labeled 'TP vert z (cm)' ranging from -30 to 30.

The top plot shows 'TrackingParticles' on a logarithmic y-axis from 10 to 10⁴. Data points are red squares with error bars, showing a peak around z = 0.

The bottom plot shows 'Ratio' on a logarithmic y-axis from 0.95 to 1.0. Data points are black vertical bars with error bars, showing a dip around z = 0. An orange horizontal line is drawn at Ratio = 1.0.

N of simulated tracks vs. sim PV z
