

Number of tracks vs collection

Number of true tracks vs collection

Number —●— DQM_TT__mkFit_BDT_

Figure 1: A log-linear plot showing the number of tracks for various particle physics processes. The y-axis is logarithmic, ranging from 0.8 to 10^5 . The x-axis lists 15 processes. Each process has a central value (red dot) and a range (gray shaded area). The 'generalTracks' process has the highest value, around 4×10^4 . Other processes like 'tripletStep' and 'tripletStep' have values around 10. The 'generalTracks' process is the only one with a value above 10^4 .

Number of pileup tracks vs collection
