

N of reco track vs dxy

N of associated (recoToSim) tracks vs dxy

Figure 1 consists of two panels. The top panel is a log-linear plot of 'fake tracks' (y-axis, logarithmic scale from 1 to 10³) versus 'track dxy (cm)' (x-axis, linear scale from -25 to 25). It shows a distribution of fake tracks with a peak at dxy = 0. The bottom panel is a linear plot of 'f' (y-axis, linear scale from 0 to 0.5) versus 'track dxy (cm)' (x-axis, linear scale from -25 to 25). It shows a distribution of 'f' values, also peaking at dxy = 0.
